The remaining Serving Areas are fed by two BLC cabinets that have a generator plug built into them. They also have a battery string with a reserve capacity of eight hours. We have multiple portable generators and stockpiled fuel for them ready to go at a moment's notice.

Our access network is FTTP. All ONT's have a UPS that has a minimum of eight hours of backup power.

Our network can operate without an external power source for both switching and broadband services.

Rerouting of Traffic around Damaged Facilities

The Company has a redundant fiber ring built into its access network. This ring also handles the interexchange traffic. The Company does not have diversity in our toll route, but we do have materials on hand and splicing equipment on standby at all times in case of a fiber cut. Broadband traffic, as well as voice traffic, uses the same local loop to the subscriber's premise.

Traffic Spikes

The Company's voice switch has a capacity of 70,000 lines with 250,000 busy hour call attempts. Currently, we have 2,700 access lines. Our average busy hour call attempts is around 2,000. We have a significant amount of unused switching capacity to handle sporadic traffic spikes. The broadband pipe to the world has enough capacity to carry more than a normal day's data if required.
